

eBay UK – Top 50 Sales Drop Automation Workflow

1. Objective

Automatically identify the **Top 50 eBay UK SKUs with the biggest sales decline** by comparing the current period with the previous equivalent period.

The automation should reduce manual work and quickly identify products that need listing, pricing, stock, or PPC review.

2. Data Required

The automation should collect the following data for each SKU:

- Account Name
 - SKU
 - eBay Item ID
 - Product Title
 - Current Period Sales
 - Previous Period Sales
 - Current Units Sold
 - Previous Units Sold
 - Current Impressions
 - Previous Impressions
 - Current Clicks
 - Previous Clicks
 - Current CTR
 - Previous CTR
 - Current Conversion Rate
 - Previous Conversion Rate
 - PPC Sales
 - PPC Spend
 - Stock Quantity
-

3. Period Comparison

The system should compare **equal date ranges**.

Example:

Current Period: 1–7 August 2026

Previous Period: 25–31 July 2026

For every SKU:

Sales Change £ = Current Sales – Previous Sales

Sales Drop % = (Current Sales – Previous Sales) ÷ Previous Sales × 100

Example:

SKU	Previous Sales	Current Sales	Sales Drop	Drop %
SKU001	£500	£300	-£200	-40%
SKU002	£800	£600	-£200	-25%
SKU003	£400	£100	-£300	-75%

4. Identify Sales Drops

The automation should:

1. Compare current and previous sales.
2. Calculate the sales drop percentage.
3. Exclude SKUs with no previous-period sales.
4. Exclude SKUs where sales increased.
5. Rank remaining SKUs by **largest sales value loss**.
6. Generate the **Top 50 Sales Drop SKUs**.

5. Ranking Logic

Primary ranking:

Sales Loss (£) – Highest to Lowest

Example:

- SKU A → £500 loss
- SKU B → £350 loss
- SKU C → £275 loss

SKU A should appear above SKU B.

Optional Secondary Ranking

If two SKUs have similar sales losses, use:

Sales Drop % – Highest to Lowest

6. Automatic Alert Levels

The automation should automatically classify each SKU:

Critical

Sales Drop $\geq 50\%$

Action: Immediate listing and PPC investigation.

High

Sales Drop 30%–49.99%

Action: Review title, images, pricing, stock, PPC and conversion.

Medium

Sales Drop 15%–29.99%

Action: Monitor and review performance.

Stable

Sales Drop $< 15\%$

Action: No immediate action required.

7. Performance Diagnosis

For every Top 50 SKU, the automation should compare:

Traffic

- Impressions
- Clicks
- CTR

Conversion

- Units Sold
- Conversion Rate

Advertising

- PPC Sales
- PPC Spend
- ROAS
- ACOS

Listing

- Title
- Main Image
- Item Specifics
- Price
- Promotion
- Stock

This helps identify **why sales dropped**, rather than only showing that sales dropped.

8. Automatic Reason Identification

The system should create a basic reason/flag.

Example:

Sales ↓ + Impressions ↓

→ Possible visibility/SEO issue

Impressions stable + CTR ↓

→ Possible title/main image issue

Clicks stable + Conversion ↓

→ Possible price/listing/offer issue

PPC Spend ↓ + PPC Sales ↓

→ Possible advertising visibility issue

Stock = 0

→ Stock issue

Sales ↓ + Competitor Price Lower

→ Pricing review required

9. Final Output

The automation should generate a report containing:

Rank	SKU	Item ID	Product	Previous Sales	Current Sales	Loss £	Drop %	CTR	CVR	ROAS	Stock	Prior
1	SKU001	12345	Pendant Light	£800	£350	£450	-56%	0.8%	2.1%	3.2	12	 Criti

Rank	SKU	Item ID	Product	Previous Sales	Current Sales	Loss £	Drop %	CTR	CVR	ROAS	Stock	Priority
2	SKU002	12346	Wall Light	£600	£350	£250	-42%	1.2%	2.8%	4.1	25	High

10. Automation Schedule

Daily

Update the latest sales and performance data.

Weekly

Generate the **Top 50 Sales Drop Report**.

Monthly

Compare monthly performance and identify recurring sales-drop SKUs.

11. Recommended Workflow

eBay Data Export/API

Import Sales & Listing Data

Match SKU / Item ID

Compare Current vs Previous Period

Calculate Sales Loss & Drop %

Filter Sales Declines

Rank by Sales Loss £

Select Top 50

Check CTR / CVR / PPC / Stock

Assign Priority & Reason

Generate Automated Report

Share With Account Holder

12. Final Goal

The automation should answer three questions automatically:

1. Which 50 products lost the most sales?
2. How much sales did each product lose?
3. What should the team investigate or fix?

This will make the report **actionable**, rather than simply providing sales data.
